

UNDERGROUND SERVICES LOCATION

Utillix

has become a trusted specialist in underground services location and our non-intrusive location methods offer fast, accurate and cost effective results on buried utilities and infrastructure layouts.

Our ability to locate and accurately map buried utilities offers a range of benefits to our clients, including:

- workforce and site safety;
- accurate utility drawings for design purposes;
- reduced damage caused to essential services during excavation;
- reduced costs resulting from the elimination of re-designs, services damage during construction and interruptions to work on site.

Utility locations are surveyed, mapped and presented as GIS shapefiles and 2D/3D drawings.

LOCATION OF

- ✓ Water pipelines
- ✓ Wastewater lines
- ✓ Stormwater lines
- ✓ Product lines
- ✓ Electrical cables
- ✓ Telecoms cables
- ✓ Fibre optic cables

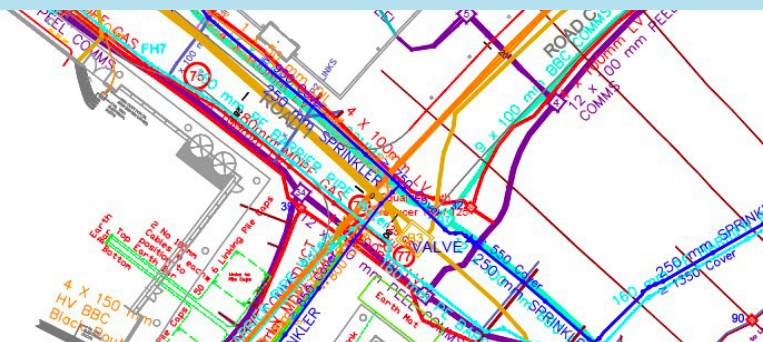

- Construction sites
- Pipeline servitudes
