

# LEAK DETECTION

## Municipal, Commercial and Industrial

**Utillix** has become a trusted specialist for leak detection services. Our non-intrusive location of underground leaks offers fast, accurate and cost-effective results on municipal, commercial and industrial pipe networks.

Active leak detection is a cornerstone of water loss management and non-revenue water reduction initiatives. Our services result in significant water and financial savings and our clients can enjoy a financial return of 5 to 8 times the cost of our service.

A key element of our success is the management of each leak from detection, through the repair process to quality control of the repair. In this respect, we have initiated an innovative web-based data management system for recording and analysis of leak location and repair.

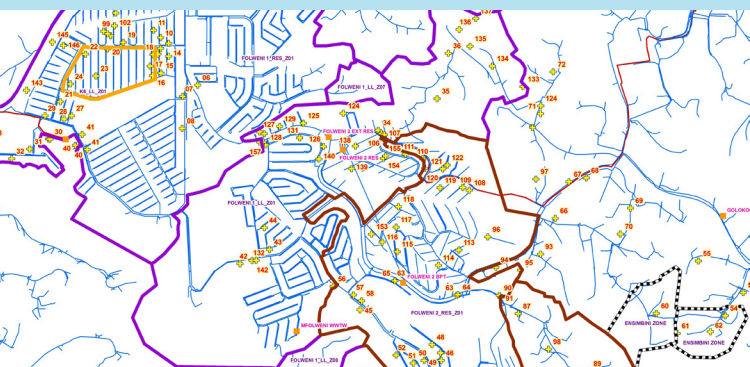

- ✓ Water reticulation systems
- ✓ Institutional water networks
- ✓ Commercial water networks
- ✓ Industrial water networks
- ✓ Industrial product lines
- ✓ Residential estates
- ✓ Bulk water mains

- Experienced, well trained and motivated staff
- Use of the latest leak detection technologies
- Web-based project reporting
- Leak status tracking
- Quality management of repair work
- Broader NRW reduction expertise
- Professional engineer management

### Our Leak Detection Teams' Track Record

- > 70 000 km of municipal water reticulation surveyed
- > 80 000 water leaks located
- > 166 000 000 litres of water saved per day
- > 18 000 non-visible leaks detected
- > 10 multi-year municipal leak detection contracts in South Africa
